1. Introduction

The DIMAKO miniPRO is a complete transformer protection relay also incorporating neutral earthing resistor monitoring and earth fault over current protection for systems that have a restricted earth fault. A typical schematic of the complete system is shown on page 10.

2. Components

The basic system consists of the following components:

- miniPRO RELAY - microprocessor controlled relay;
- DIMAKO CT - a dedicated current sensing CT;
- DISPLAY UNIT - for visualising the controlled parameters;
